

Phishing Investigation Report

Findings

Time: 2021-01-26 06:41:18 UTC

Host: The Major on Earth.

IOC Domain: pashter.com

IOC IP: 93.99.104.210

Possible Malware Family: N/A

Filename: PuzzleToCoCanDa.pdf

SHA256 Hash:

cf83e1357eefb8bdf1542850d66d8007d620e4050b5715dc83f4a921d36ce9ce47d0d13c5d85f2b0ff8318d2877eec2f63b931bd47417a81a538327af927da3e

Investigation

On 2021-01-26 06:41:18 UTC, the army major on earth received a ransom email which demanded that 1 Billion CoCanD's be paid in return for the president's daughter and other civilians. The email contained an attachment which was labelled as a pdf file but analysis confirmed that this was a zip file. After extracting the zip file, three more files were found and analysed. These were confirmed to be a jpeg image, a pdf with a note and an xlsx file. The pdf contained a note that stated that the president's daughter and other civilians were safe, that proof of life could be found in the jpeg image and that the location of where to send the ransom money. The jpeg file contained a picture of the president's daughter's crown. The xlsx document contained the location of where to send the ransom money.

The email was sent from a fake email service that is available online although the author of the email could be found by examining the metadata of the email and attachments to be Pestero Negeja. This name aligns with the Reply-To field when analysing the email data.

WHO – Sender – Pestero Negeja: 93.99.104.210

WHAT – A ransom email was sent from a fake email service, emkei.cz, with an pdf attachment which was confirmed to be a zip file containing further files and information.

WHEN: Based on the Received server data the email was received on 2021-01-26 06:41:18 UTC

WHERE: The activity took place on a computer on the planet of CoCanDa.

WHY: Ransom.

HOW: The sender used a fake email service to send a ransom, however, the sender attached document that the sender authored, and their identity was able to be determined.

Recommendations

1) Create an alert for emails where the SPF authentication results are set to 'fail'.

2) Run a query searching the organisation's email server for any other emails received with the subject: A Hope To CoCanDa to identify if any other emails of this nature were received and responded to.

3) Consider blacklisting the domain pashter.com and blocking the server emkei.cz
